

Nagano City Flood Hazard Map Nakajo

Map Key

- Landslide disaster alert area*
- Landslide disaster special alert area*
- Presumed area of building collapse and flood (flood flow)
- Presumed area of building collapse and flood (bank erosion)
- Railways (JR/private railways)
- National/prefectural roads
- Municipal borders
- Administrative district borders
- Police stations/boxes/substations
- Fire stations/substations
- City offices/branch offices (liaison offices)
- Hospitals
- Emergency first-aid stations
- Water-level gauges/water-level observation points/rainfall observation points
- Live cameras
- Warehouses for emergency supplies/flood prevention supplies
- Disaster administrative radios
- Underpasses
- Main drainage pump stations

Evacuation Center Key

Designated emergency evacuation centers

Designated emergency evacuation centers with shelter

The keys above represent evacuation centers, and those below show the type of disaster that the evacuation centers/shelters are for.

Types of disasters	Symbol
Flooding	[Blue house icon]
Landslide	[Green house icon]
Earthquake	[Red house icon]

List of Evacuation Centers

Designated emergency evacuation centers (*: doubles as designated evacuation shelter)	Disasters that may require evacuation			Map coordinates

Sumeragi Danchi Community Center ★	○	○	○	B4
Michi-no-Eki Nakajo Furusato Sq.	○	x	○	B4

Evacuation action according to the extent of flooding

Below are the estimated flood depths during flooding. Promptly evacuate according to your circumstance such as building conditions. This map shows the deeper estimate for areas where flood extents of different rivers overlap.

Approximate flood depth (Estimated maximum rainfall L2)	Flood flow	Bank erosion
20.0m or more	[Illustration of water over a roof]	[Illustration of water eroding a bank]
10.0 to less than 20.0m	[Illustration of water over a house]	[Illustration of water eroding a bank]
5.0 to less than 10.0m	[Illustration of water over a house]	[Illustration of water eroding a bank]
3.0m to less than 5.0m	[Illustration of water over a house]	[Illustration of water eroding a bank]
0.5m to less than 3.0m	[Illustration of water over a house]	[Illustration of water eroding a bank]
Less than 0.5m	[Illustration of water over a house]	[Illustration of water eroding a bank]

Early evacuation is necessary within flood flow areas as wooden buildings may collapse.

Early evacuation is necessary within bank erosion areas as even solid buildings may collapse.
